AI Is Everywhere: Two Warm-Ups

Two short warm-ups from the Introduction. Ten minutes, tops.

TRY 1 AI is everywhere

Look around your environment and name three AI-driven technologies you use every day. Then think about how each might apply to intelligence analysis. Example: how would a recommendation engine help an OSINT investigation?

Everyday AI technology	What it does for me	How it could help an intelligence task

TRY 2 AI and the intelligence cycle

Think of a real intelligence task you have worked on. Where could AI have improved efficiency or effectiveness? Note one idea per phase, and one thing that could go wrong.

Phase	Where AI could help	What could go wrong
Planning and requirements		
Collection		
Processing and evaluation		
Analysis and production		
Dissemination and consumption		
Feedback		

The task I was thinking about
